**Subject:** WATER INSURANCE for California....Attention: Delta Blue Ribon Task Force

Attention ! Governor's [Delta Vision Blue Ribbon Task Force](#) !

California needs WATER INSURANCE !

It costs California ZERO to INVESTIGATE a new fresh water Source that will provide ONE MILLION acre feet a year.

In the event of severe drought or earthquake, an additional alternative supply could save the Delta, thousands of lives and billions in financial losses.

Development of the Source is environmentally and economically feasible and most importantly will not damage the water rights of anyone, anywhere !

Conservation is terrific, but at some point, it will not be enough regardless of the price.

INSURANCE is necessary when it is impractical to suffer a particular loss.

California must obtain WATER INSURANCE before the crisis, not after it occurs !

A new Source of ONE MILLION acre feet to insure filling of the new reservoirs is also good INSURANCE.

Complete details of the various aspects of the Source are available upon request.
